Preventative Maintenance You Can Plan For

Bastian Solutions will develop a scheduled preventive maintenance routine that allows the customer to plan for scheduled PM intervals. The service technicians will perform all preventive maintenance functions in conjunction with the manufacturers' specifications.

Typically, these maintenance items include the following:

- Checking motors, reducers and bearings for excessive noise
- Checking V-Belts, drive chains and sprockets for excessive wear
- Checking for loose bolts throughout the system
- Checking air pressure on regulators
- Checking for air leaks on lines and air bags
- Checking temperature on motors and reducers
- Lubricating reducers, drive chains and zerk fittings
- Adjusting tension on belts
- Checking for and replacing broken O-rings

Emergency Maintenance, 24/7

As an added benefit of having a preventative maintenance plan from Bastian Solutions, 24-hour emergency response service can be provided for emergency repairs. Within 4 hours of notice, we will provide a service technician to diagnose and repair the system.
