The Composite Difference

Bastian Solutions took the challenge head on and engineered a pallet with the benefits of the wood block pallet (upfront cost and strength), the benefits of plastic (cleanliness, international shipping, and re-usability) with additional Internet of Things capabilities.
Strength & Durability
With our innovative fiber reinforced lightweight composite core and armored skin. ROGUE is rackable up to 2800lbs, impact resistant, dimensionally stable, and is reusable for more trips. No more one time use pallets and no longer will products be damaged due to pallet failure.

Safety
No more injured employees due to splinters or protruding nails. Loss of inventory due to a broken wood pallet is a thing of the past. ROGUE is constructed to ensure your employees’ safety.

Integration
We sought out to applied our expertise in material handling systems integration when creating the ROGUE Composite Pallet. ROGUE is compatible with your current supply chain and material handling equipment (MHE) such as pallet conveyor, pallet dispensers, AS/RS, fully automated systems, & robotic palletizers.

Cost Savings
ROGUE Composite Pallet offers the most competitive life cycle cost while providing all the benefits of a more expensive plastic or steel pallet, at the low cost of a traditional wood pallet, eliminating the high upfront costs for quality pallets.

Cleanliness
High sanitation areas for food or medical products need to avoid outside contaminants. We engineered ROGUE to meet FDA cleanliness requirements. The pallet is washable, eliminating the need to fumigate wood pallets that may contain outside pests or bacteria.

Sustainable
ROGUE is constructed with low environmental impact materials that enable ROGUE to be reusable for years to come, greatly reducing the use of natural resources such as wood and required landfills.

Industry Applications
Ideal for defined loop supply chains such as grocery, pharmaceutical, retail, automotive and home & garden.

Guarantee
Bastian Solutions has a long and proud history of standing behind its products and services. The ROGUE comes with 100% customer satisfaction as well as an optional “Try It Before You Buy It” program.
INNOVATIVE
Asset Tracking Option

BlueHound Portal & IoT Asset Tracker

If desired, composite pallets can be enabled with our BlueHound Internet of Things (IoT) asset tracker which features a web-based portal where users login to see their tracking information. With three simple tabs, Map, Home and Analytics, users can easily navigate through their data and insights.

At Bastian Solutions, our vision is to optimize our customers’ facilities and increase visibility and efficiency throughout the supply chain. We make this possible by offering a range of internet-enabled devices along with our advanced material handling technologies. Bastian Solutions engineered the BlueHound Asset Tracking System to go beyond the industry standard of traditional tracking.

Sensors:
- GPS
- Verizon Cellular Connection
- Movement
- Impact
- Temperature

Add on Sensors:
- Bluetooth
- Humidity
- Air Pressure

Size & Weight:
- Embedded within Pallet Leg

Composite Pallets Fit Within Your Current Supply Chain

The composite pallet was specifically designed to meet the requirements of multiple levels of the supply chain whether if your facility is a fully manual, fully automated, or somewhere in between. Bastian Solutions’ engineers have designed the composite pallet to meet all requirements for your distribution needs.

Marketing Opportunity
ROGUE can have custom graphics installed to better fit your company’s brand. Custom colors are available by request.
