

Only those who keep things on the move
can shape the future themselves

**Right from the start:
a reliable partner with a complete, flexible range of products**

No two warehouses are alike. That's why no two DAMBACH Lagersysteme solutions are the same. Every single one is developed together with our partners – because in everyday operations it's the details that make the difference for efficiency and economics. Our all-round expertise is founded on more than 40 years of experience as a manufacturer of rail-guided stacker cranes and mini-load stacker cranes for great heights. That expertise includes our own production facilities for all key elements, shallow corporate hierarchies and highly motivated staff – that's what we understand by flexibility that serves the customer.

We prefer task-based to model-based:
**warehouse systems with integrated security
for the future**

**Rail-guided stacker cranes and compact shuttle:
good throughput rates and high storage density under control**

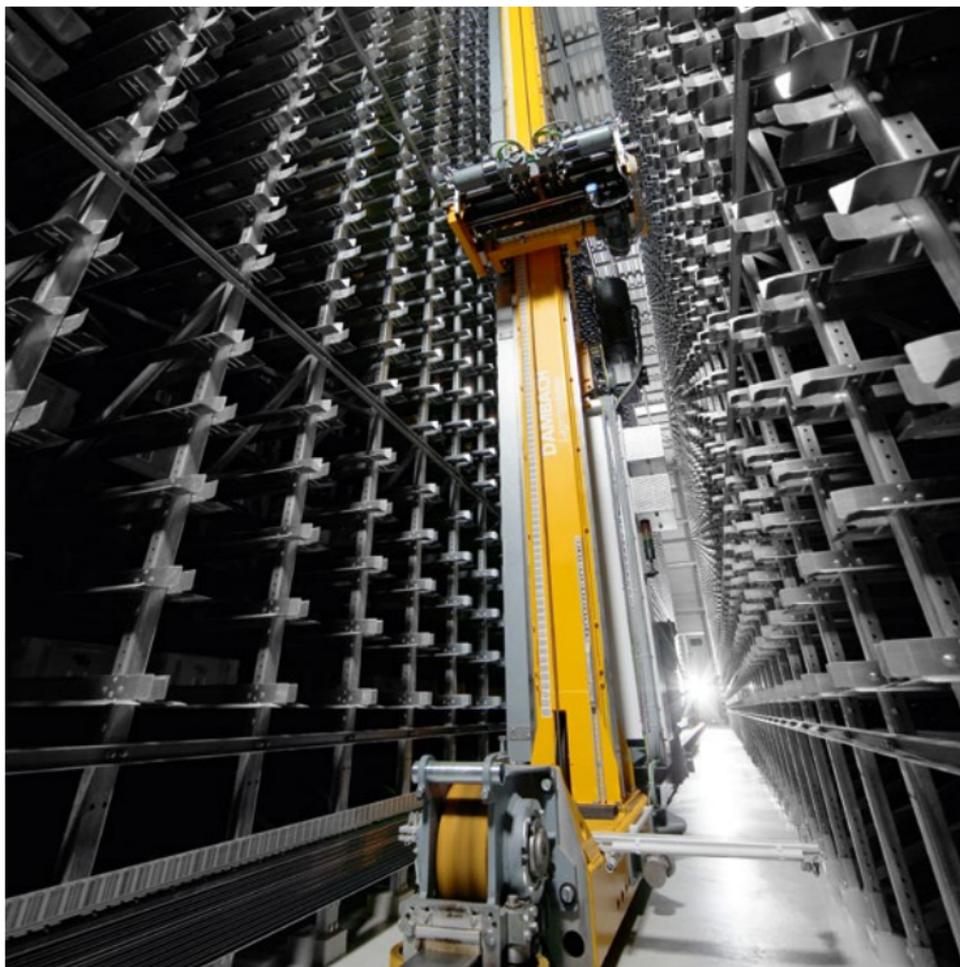

Whether aisle-bound or curve-going models, no DAMBACH rail-guided stacker crane will fail to impress when it comes to space utilisation and throughput rates. With such a broad, flexible range of products, it is possible to design a system with storage form, space requirements and throughput tailored to the needs of a huge variety of diverse applications. Using compact shuttles together with rail-guided stacker cranes results in space-saving, multi-deep storage options. Power caps guarantee fast recharging times (minimum of 8 seconds) when transferring from one aisle to another, which means 24/7 operation without downtimes.

One partner for all situations:
that vital extra for lasting investment security

**Pallet-handling technology:
apron and warehousing technology working together**

DAMBACH's pallet-handling technology has been specifically developed for applications on the aprons of high bay warehouses. And that means one interface less because stacker cranes and handling systems come from the same supplier. A full, flexible range with roller, vertical and chain conveyors, roller lift tables, turntables and traversers ensures fast, effective materials flows. Efficient modernisation concepts can upgrade warehouses to match the latest standards – even the systems of manufacturers who have gone out of business or no longer provide support for warehousing technology.

With experience and enthusiasm:
people who get things moving for you

**Control systems and modernisation:
that decide extra for efficiency and reliability**

DAMBACH Lagersysteme can supply advanced control systems for rail-guided stacker cranes and materials-handling installations. Central or decentralised control arrangements linked via bus systems to suit each application. Different configuration levels can be supplied: from integrated factory pre-wiring to fully functioning control.

From planning to service:
expertise we'd like to share with you

For maximum economic efficiency at every stage: tailored services all-inclusive

All our services can be tailored to the particular requirements of individual companies. Those services include:

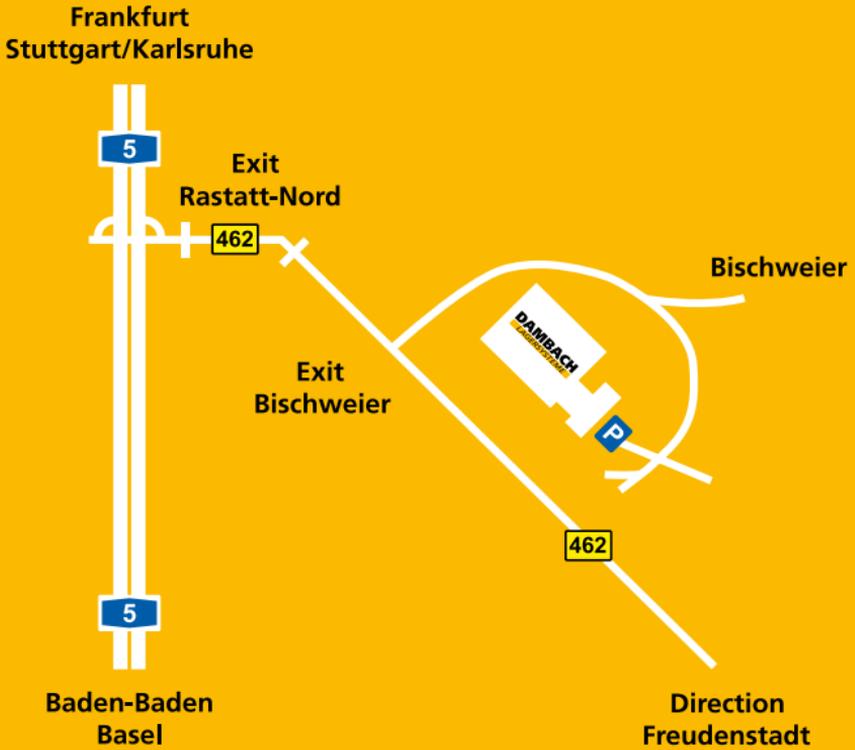

- Remote diagnosis
- Spare parts service
- Maintenance, also non-DAMBACH systems
- Repairs
- Safety check
- Inspection/Updating
- Training

Dynamic warehousing:
